

Big kids need boosters!

Did you know?

- More than 15% of kids 4-7 are in seat belts **too soon**, increasing risk of abdominal and head injuries.
- Kids' risk of car crash injury is **45% less with booster seats** versus seat belt only.
- Boosters **make seat belts safe** for little bodies: low on the thighs, crossing shoulder and chest.
- Boosters are needed until kids can pass the **seat belt fit test** (around 4'9").
- Consider a **compact or travel booster** for safe rides with friends and family.

Meet the experts

Learn more about boosters at a Safe Kids York County “Boosters are for Big Kids” display this spring. Meet the K9 team from the Sheriff's Office and other Child Passenger Safety Technicians, and check out booster options! Find us at one of these Easter Egg Hunt events:
